Players Logs in

Players choose objects to represent them

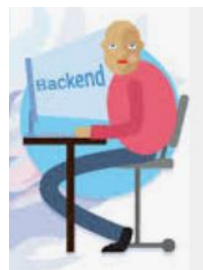

Players choose the dice face to play with (Dice 6, Dice 10, or Dice 12)

Each player gets the dice result, which is a random number with maximum number is the highest dice face that they chose

Each player moves for some spaces according to the dice result

The backend team integrates the dice function to the actual game console online

The backend team includes the function to show the rolled dice result into the dice generator function

The backend team integrates the result of the rolled dice to the object's movement on the game board
